Search and Insight from Redstor

Gain borderless visibility of your data, mitigate risk and evidence compliance

redstor™

Searched and found.

While the world of data management is dynamically morphing to accommodate exponential growth, data complexity and multi-cloud; the world of regulation and compliance mounts and tightens. The threat of enforcement action, catastrophic fines and reputational damage is putting data compliance at the top of many business' agenda.

As data grows and becomes decentralised it can be an almost impossible task to keep track of what it is and where it exists. Data protection, sovereignty and security are more important than ever. And, depending on the type and scale of data you process, you may be legally required to appoint a Data Protection Officer. Trying to manage and control fragmented data is now a leading priority for all businesses as data becomes more intrinsically valuable. Onerous regulations, such as GDPR, place considerable strain on already stretched IT resources. And, it's likely that further regulations will be enforced.

Being able to quickly and easily access data, as well as evidence compliance is crucial. Modern businesses need a unified view of all their data, wherever it is stored. In most companies, content data searches are carried out every day. And, with unstructured data growing by 40-60% per year, a simple, effective, proven solution is needed.

Borderless visibility of your data

Discover, search and action the entirety of your data with Redstor. We enable you to identify and mitigate data risks and reduce data storage costs by easily moving data to Redstor's cloud archiving platform, which has no impact on data accessibility.

Redstor's InstantData™ ensures all data can be streamed instantly on demand. Meaning compliance with legislation and regulation, including the requirement to securely erase files from within backup and archive environments, is made simple and auditable.

How confident are you, when asked, that you would be able to locate all the data you hold on a customer or an employee?

Search and insight from Redstor provides a centralised source of truth for unstructured data on any device - get data-driven intelligence at your fingertips. We enable multiple users to search the entirety of their data and find exactly what they need quickly and easily:

Easily evidence compliance

Data challenges presented by GDPR and other regulations are now a thing of the past. We help you comply with regulations and legislation by easily and quickly identifying files that require action, including deletion. Backups and archives created and stored with Redstor can be searched to make sure that every reference to a data subject is found, instantly.

Discover, search and action data from any device

Our intuitive web interface allows you to interrogate all your unstructured data instantly, wherever you are. Simply log into a user-friendly application and run highly-detailed searches across all your data. Files returned in search results can be accessed immediately via your browser, and if required, files can be deleted from backups and archives.

Source data in any format

Our customer-centric software enables you to find data in a range of file formats. It's particularly powerful for identifying personal information, such as contact information, and where sensitive data such as passwords or credit card numbers exist in unstructured data.

Control all your data

Unstructured data indexed for search can come from any server protected by Redstor and includes data protected from cloud apps such as Microsoft OneDrive. Regardless of where your data resides, you can confidently control and access it with Redstor.

Fully auditable

Only users with appropriate permissions can download or delete files shown in results, and the history of all search and delete sessions is stored. The erasure of relevant data is simple, monitorable, and auditable throughout the deletion process.

Forward-thinking companies need to be considering long-term data management strategies that give them hands-on control and the agility to respond to shifts in the landscape. We understand this at Redstor, and help over 40,000 clients around the world discover, analyse, control and protect their critical data. How can we help you today?

See the future of data management

We are disrupting the world of data management with our pioneering technology, which provides visibility and streamed, on-demand access to all your data, wherever it is stored, through a single control centre.

Trusted by more than 40,000 global customers across all industries, we use our proven, leading technology to help you discover, analyse, control and protect your critical data.
